Gents,

Attached you will find a PDF showing an aerial photograph showing the sample locations and pH. The average pH of the pond has gone up to 1.59, so we are seeing progress just a little slower than we had originally anticipated. Recently we have upped the pump size to approx. 500 GPM (previously we were only pumping about 300-350 GPM). And starting next week we will be receiving 5 trucks of LKD a week vs the previous 4 trucks per week. As for drilling we now have Major Drilling onsite drilling on the Candy B. We have approximately 33 holes left to drill for this campaign. It is our hope to be completed drilling by the end of October 2016. As for the SX/EW we are now in care and maintenance mode.

Best,

Leslie Buhler
